

WOPR STACK Intelligence Platform

A visually clean SaaS-style dashboard website.

Think:

- modern enterprise
 - Stripe-like simplicity
 - dark blue + light orange accents
 - animated process flow
 - maturity scoring visuals
 - carrier qualification matrices
-

Core Concept

“Measure the Automation Readiness of Every Payroll-to-Carrier Relationship”

That’s powerful.

Homepage Structure

HERO SECTION

Large Statement

“Measure. Automate. Scale.”

Subheadline

“STACK transforms payroll reporting relationships into measurable automation workflows.”

Visual

Animated:

PDF → WOPR → Carrier

with:

- Store
- Transform
- Analyze
- Check
- Kickoff

lighting up as phases complete.

SECTION 2 — THE STACK MODEL

Beautiful horizontal timeline:

S	T	A	C	K
Store	Transform	Analyze	Check	Kickoff

Each expands on hover.

SECTION 3 — AUTOMATION MATURITY

Example cards:

Relationship	STACK Score
ADP → AmTrust	4.2
QuickBooks → Travelers	1.8
Paychex → Omaha National	3.7

This becomes:

- qualification
 - forecasting
 - product targeting
-

SECTION 4 — RELATIONSHIP INTELLIGENCE

This is where it gets VERY powerful.

You can begin ranking:

- carriers
- payroll providers
- brokers
- agencies
- workflows

by:

- automation readiness
- onboarding complexity
- exception frequency
- manual dependency

That becomes proprietary operational intelligence.

SECTION 5 — EXECUTIVE DASHBOARD

Example metrics:

- Average STACK Score
- Carrier Automation Readiness
- Human Dependency Reduction
- Autonomous Submission Rate
- Payroll Compatibility Score

Now leadership sees:

- measurable progress
 - operational efficiency
 - automation ROI
-

The BIG Opportunity

Tomorrow morning:
do NOT position this as:

“a spreadsheet”

Position it as:

“The STACK Framework”

A proprietary methodology.

That changes the conversation completely.

You Could Even Define It Like This

STACK™

A Payroll-to-Carrier Automation Maturity Framework

or

STACK Intelligence™

Operational visibility into payroll reporting automation.

That sounds enterprise-level immediately.

What I'd Build First

Phase 1 (Tomorrow)

Simple but beautiful:

- Hero section
- STACK explanation
- Relationship score table
- Example automation matrix
- Light animations

- Dark blue/light orange branding
-

Phase 2

Interactive scoring engine.

User selects:

- payroll provider
- carrier
- intake method
- validation method

Then STACK score calculates automatically.

Phase 3

Atlas integration.

Now every client relationship in Atlas has:

- STACK score
- automation maturity
- bottleneck identification
- onboarding estimate
- AI readiness

That becomes extremely defensible IP.
